August 13, 2004 MDA #117 VOLUME 29 No. 32 PUB. Weekly

Market Analysis - August 12, 2004

Michael Haigh-Assistant Professor University of MD Cooperative Extension

Corn had a little giddy up last week with price increases each day. That is old news however because this week was a week full of events and fundamental news that traders had to grapple with. Even at the start of the week the heavily traded December contract was able to finish above it 20 day moving average for each day (except Wednesday) leading up to the USDA report on Thursday. However corn came under pressure as soon as the report was released. World production jumped up to 26.095 billion bushels, up from last months 25.542 billion and last years number of 24.285 billion. World ending stocks were also up. Corn export news on Thursday gave a nice break from this bearish news with corn net sales including 318,000 tons for old crop and 458,000 tons for the new crop, taking the combined amount above the low end of guesses. This decent news was lost however in the mix of news from the USDA and went largely ignored. Corn is clearly at a crossroads here and there is equal chance of a drop as there is a rise. Last week was a sideways week for soybeans which, based on previous weeks, was a good week for beans. However beans were under pressure this week due to a lack of a weather concern and expectations for a decent negative report on Thursday. Perhaps this built up negativity explained the huge jump in prices when the USDA released its report. Production projections dropped from July's figure of 2.94 billion to 2.877 billion. 2004-2005 ending stock projections were also cut from 210 million to 190 million. 2003 -2004 ending stock numbers provided a lot of interest. It was left unchanged at 105 million bushels despite the crush being increased by 15 million bushels and exports lowered by 10 million meaning it should have sent the number down to 100 million. According to DTN experts this number has never hit 100 million. Is the USDA hoping that people can't add up and so prices won't explode upwards? Probably not – but that did get the bulls attention and don't be surprised if you see a bounce up later. Maybe it didn't bounce today because soybean net sales for old crop were just 1,700 tons for old crop and 230,300 tons for new – whilst traders were looking for 500,000 tons. Still – it seems a lot of traders are considering a bullish outlook. Wheat tried to turn around last week and gave a decent effort bearing in mind we have had a two month meltdown in that pit. It was just horrible on Thursday when we saw more unwanted pressure form the USDA report. We saw an increased projection of U.S. and world production and ending stocks. Spring wheat (U.S.) is expected to jump from 544.5 million from the July projection of 501 million. Total wheat projection is put at 2.123 billion bushels. With the recent weakness in the futures, cash basis has really improved. That is obviously a small consolation for what has been a horrible few months

WEEKLY CROP WEATHER SUMMARY

MARYLAND AGRICULTURAL STATISTICS SERVICE

Maryland farmers could finally get into the fields this week with 4.6 **days suitable for field work** for the week ending August 8, 2004. Average air temperatures were in the mid 60's with minimum temperatures reported in the low 50's. Farmers were able to dry **hay** and resume harvesting a decent third cutting of hay. **Alfalfa hay** third cutting is 70 percent compared to 50 percent the previous week. **Corn** is 71 percent dough, 20 percent dent, and is in mostly good to excellent condition. **Soybeans** are 68 percent bloomed and 45 percent has set pods, while only 3 percent this time last year was setting pods. **Topsoil moisture** is 74 percent adequate and 26 percent surplus.
